### DESCRIPTION

The **EXT-POE4 extender** is a device designed to increase the PoE and Ethernet range by additional 100 meters using UTP Cat. 5 cable. The Extender can be powered using a PoE switch or another PoE-compliant device (PoE IN input) or an external 44-57VDC power supply unit (DC IN input). The power source is selected using the *Power Source* jumper. The output voltage and data are available at the PoE OUT1 and OUT2 outputs designed for connecting cameras or other IP devices using PoE power supply. The maximum load current is 0,4A (0,3A/port). The PoE OUT1 and PoE OUT2 ports are supplied over 4/5 (+) and 7/8 (-) pairs, which, according to the Ethernet standard, are not used for data transmission (data transmission uses 1/2 and 3/6 twisted pairs).
